Edgeprint

Put your camera settings on your photos.

An Android app that frames each photo with the camera, lens and exposure it was shot with, then saves it at full resolution. It works offline, and your originals stay untouched.

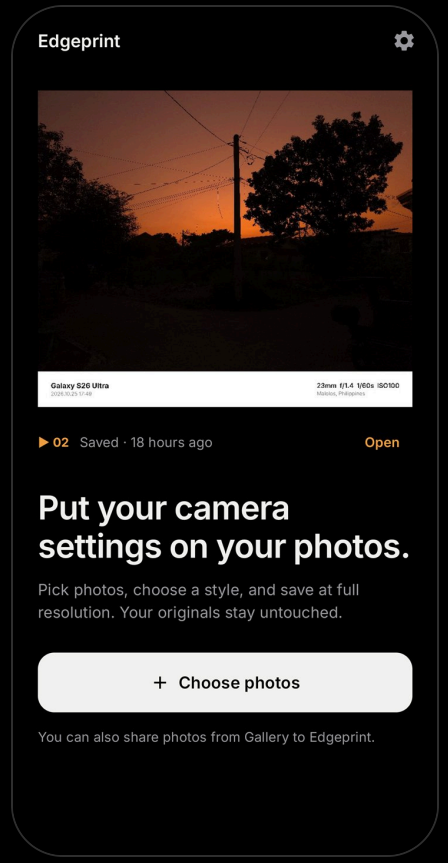

John Russel L. Angulo · 2026

Three steps, no fiddling.

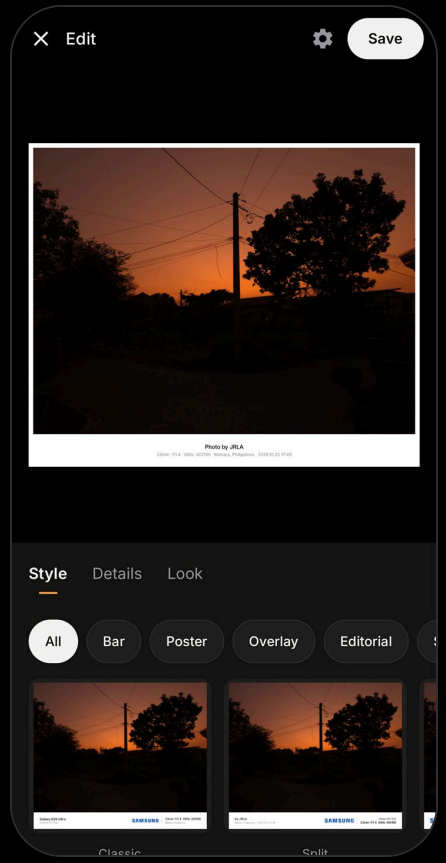

Edgeprint reads the details already stored in your photo, so most photos are ready the moment they open.

STEP 1

Pick photos

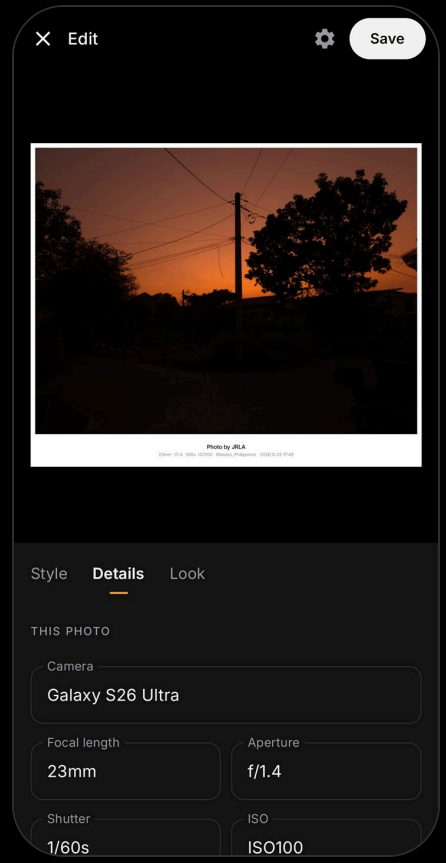

Choose up to 50 at once, or share them straight from Gallery.

STEP 2

Choose a style

Every thumbnail is a live preview of your own photo.

STEP 3

Check and save

Edit any value, then save a new full-resolution JPEG.

25 styles in six families.

From a quiet info bar to a magazine layout, each style is drawn at your photo's full resolution.

Bar 4

Classic, Split, Focal, Logo first

Frame 5

Border, Instant, Film 35, Film 120, Mat

Poster 5

Gallery, Line, Shadow, Card, Chips

Overlay 6

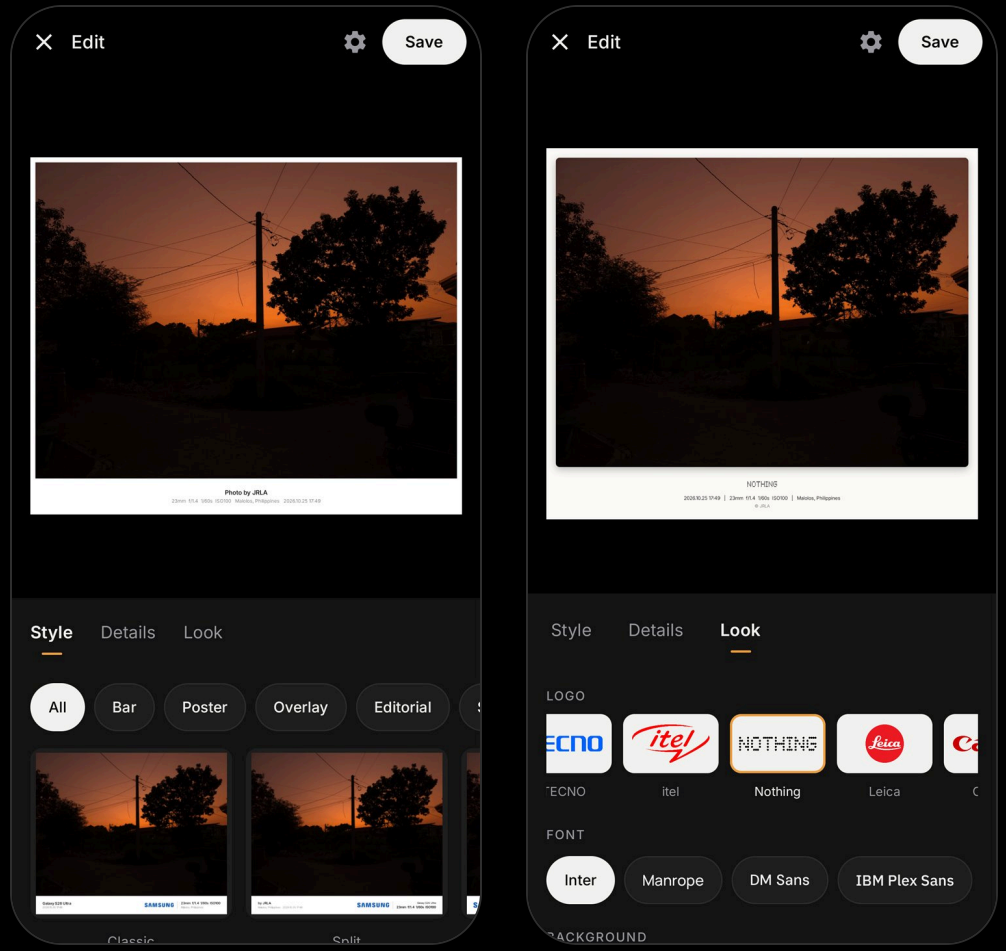

Strip, Caption, Center, Signature, Corners, Inset

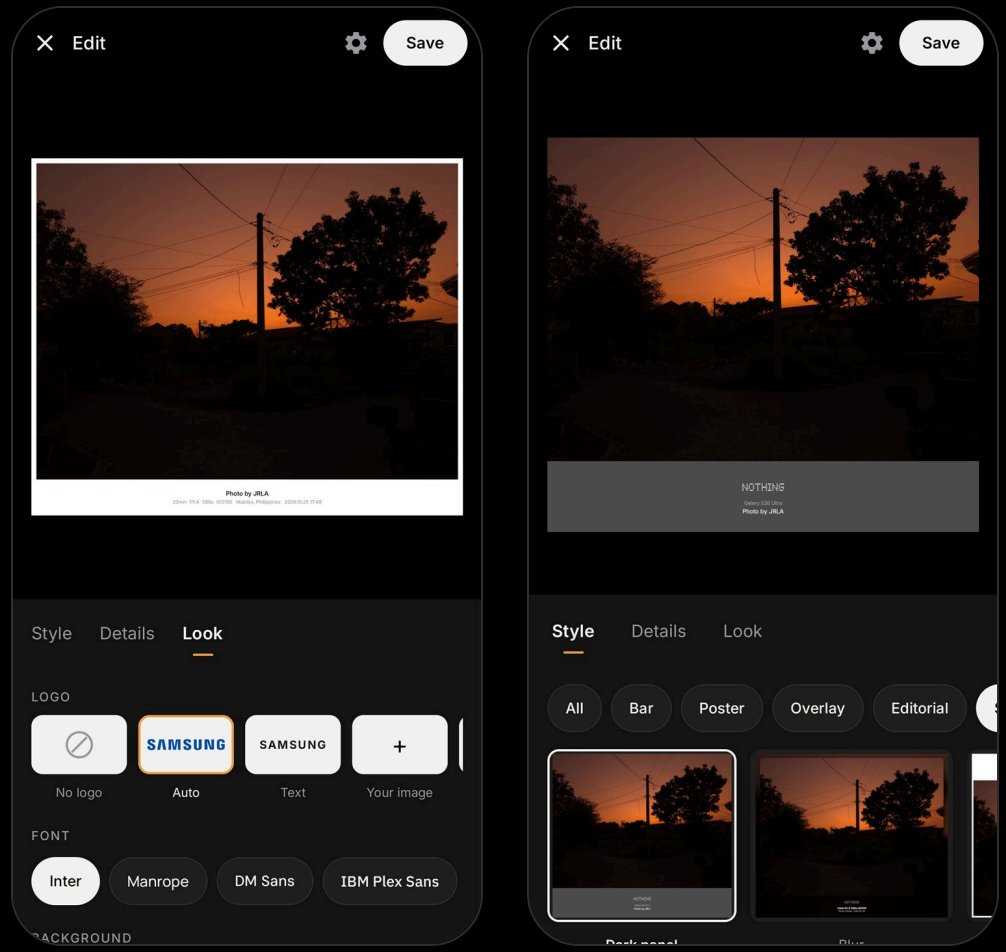

Editorial 2

Side panel, Magazine

Special 3

Dark panel, Blur, Header

Make it yours.

The camera brand's logo is picked from the photo automatically and switches between black and white to suit the background.

52

Camera and phone brand logos, from Leica to Nothing, or upload your own.

10

Bundled fonts, including Inter, Space Grotesk and Playfair Display.

5

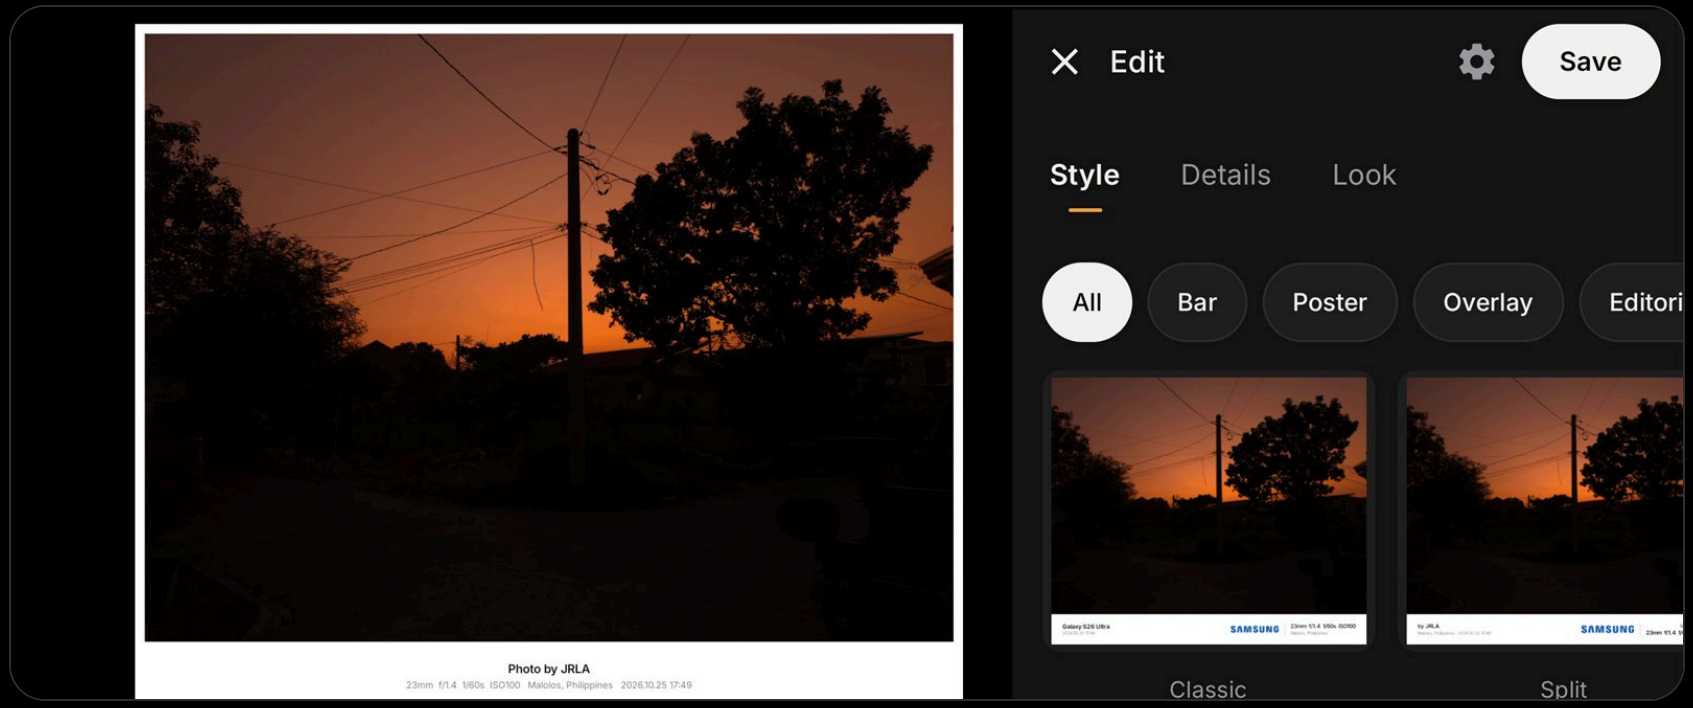

Aspect ratios: Original, 1:1, 4:5, 9:16 and 16:9.

Every

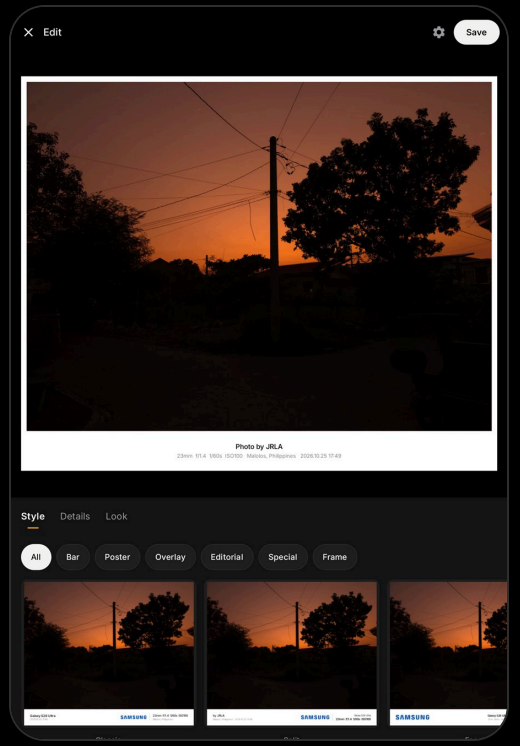

detail is editable: camera, lens settings, date, place, your name, a title or a quote.

Built for any screen.

In landscape the tools move beside the photo, so the photo keeps the full height. Tablets get a roomier panel, and both layouts keep clear of the camera cutout and stay usable with large text.

Phone, landscape: photo on the left, tools on the right.

Tablet, portrait.

Private by design.

Edgeprint doesn't request internet access, so it can't upload your photos. There are no accounts, ads or tracking.

Photos and media

Optional

Only to read GPS from the original file. Picking works without it.

Media location

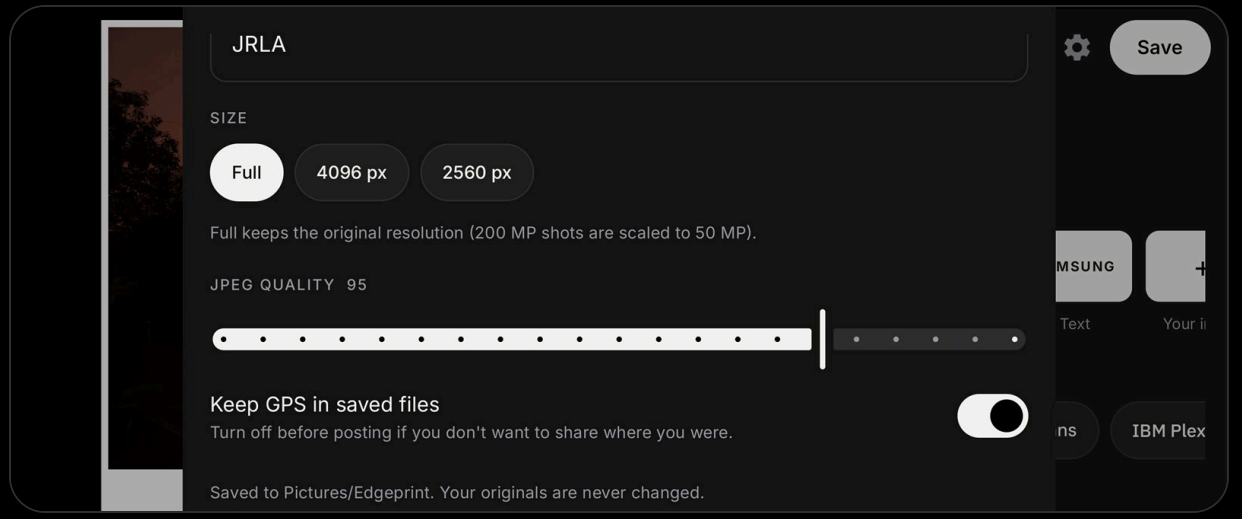

Required by Android

Lets the app see a photo's GPS so it can show the place.

Internet, camera, contacts

Not requested

Nothing leaves your phone through the app.

Turn off “Keep GPS in saved files” before posting to keep where you were private.

Specs.

Platform	Android 10 and newer, targets Android 16
Built with	Kotlin, Jetpack Compose, Material 3
Export	JPEG at full resolution (up to 50 MP), 4096 px or 2560 px, adjustable quality
Metadata	Camera details copied to the saved file; GPS optional
Batch	Up to 50 photos, saved in one go
Size	About 7 MB, works fully offline
